

Table 1 - Boreal Woodland Caribou in Canada

Territory and Provinces	Number of herd home ranges or management units	Number of home ranges that are “not self-sustaining”	Approximate number of caribou (Total # and % of Canadian population)		Size of their home ranges (km ² ; % of total Canadian range of boreal caribou; % of province/territory in boreal caribou range) ⁱ			Extent of their home ranges that are disturbed (%) ⁱⁱ
			#	%	km ²	% Cdn range	% Prov/Terr	
Northwest Territories	8, including 2 shared with AB	2	5,800	16	477,496	19	41	8
British Columbia	6 ranges, including one shared with AB	4	1,000	3	25,193	1	3	52
Albertaⁱⁱⁱ	13 ranges, including 2 shared with NWT and 1 shared with BC	13	3,000	8	120,491	5	18	45
Saskatchewan	8	4	4,300	12	278,994	11	43	8
Manitoba	11	2	2,500	7	211,857	9	33	11
Ontario	4	1	5,500	15	455,263	19	42	6
Quebec	6	3	11,000	30	680,433	28	44	14
Labrador^{iv}	4	1	3,300	9	207,669	8	71	4
Canada	57	30	36,000	100	2,457,395	100	25	12

ⁱ “Size of the home range (km²)” was determined from a GIS assessment of the ranges identified in the Scientific Review.

ⁱⁱ “Condition of the home range (% disturbed)” is the category and percentage disturbance of all ranges identified in the Scientific Review.

ⁱⁱⁱ The population and area of home ranges in Alberta includes the population and area of the herds that AB shares with NWT (2) and BC (1), which inflates the total for population and area of home ranges for Alberta and reduces the population and area in British Columbia and the Northwest Territories.

^{iv} “Labrador” is mainland portion of Newfoundland and Labrador and does not include the area of populations of caribou on the island of Newfoundland.
